Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-9 and 18, drawn to an active matrix substrate and a display device, classified in class 349, subclass 43.

II. Claims 10-17, drawn to a method for manufacturing of an active matrix substrate, classified in class 438, subclass 30.

1. The inventions are distinct, each from the other because of the following reasons: Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the claimed product can be made by a materially different process wherein one resist mask is used to pattern the gate insulating film and the semiconductor layer (instead of using the patterned gate metal as a mask) and another resist mask is used to pattern the gate electrode or the source and drain electrodes (instead of using the patterned ITO film as a mask).

2. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or vice versa, restriction for examination purposes as indicated is proper.

Further, Group I and Group II contain claims directed to the following patentably distinct species of the claimed invention:

Group I

A: claims 1-3 drawn to an active matrix substrate according to Fig. 1.

B: claims 4-7 and 18 drawn to an active matrix substrate according to Fig. 3.

Group II

C: claims 10-13 drawn to a method for manufacturing of an active matrix substrate according to Fig. 2.

D: claims 14-17 drawn to a method for manufacturing of an active matrix substrate according to Fig. 4.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of either Group for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 8 and 9 are generic with respect to A and B.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations

of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Any inquiry concerning this communication should be directed to Tai Duong at telephone number 703 308-4873.
